Profile

My name is Abubakar Saeed, a University of Wah graduate with knowledge in Python, Web Development. My expertise is in web development. In my work, I am specializing in the implementation of web development.

Professional Experience

Web Developing, <i>Petcon Oil and Gas Services</i> https://www.petconservices.com/	08/2025 – Present Islamabad
• Designed and developed responsive company websites with clean UI/UX, ensuring brand consistency and seamless user experience across devices. • Built an Expense Tracking System using Python and Flask, enabling users to manage finances with CSV/Excel export functionality and an intuitive dashboard. • Created a To-Do Digital Diary application with Flask and AP Scheduler, featuring task management, email alerts, and a responsive CRUD interface. • Developed an AI Voice Generator using Flask and pyttsx3, offering text-to-speech conversion with customizable gender, speech rate, and WAV/MP3 export options. Implemented a real-time PPE Detection System using computer vision (YOLOv8) to monitor workplace safety compliance and detect safety gear violations. • Focused on building scalable web applications and automation tools that bridge full-stack development with practical enterprise solutions.	

Projects

Deepfake Detection Using Machine Learning, <i>FYP</i>	10/2024 – 05/2025
• Developed an AI-powered deepfake video detector using Python, Flask, and machine learning, enabling real-time video analysis and classification. • Integrated end-to-end pipeline from dataset preprocessing to model deployment, ensuring accurate detection of manipulated content. • Built a responsive web interface for video upload and inference, making the system accessible for practical use cases. • Strengthened expertise in machine learning, Flask web development, and computer vision techniques for media authentication.	
Helmet Detection, <i>Semester Project</i>	05/2024 – 06/2024
• Implemented a real-time helmet detection system using YOLOv8 and OpenCV to monitor safety compliance in live video streams. • Trained a custom YOLOv8 model on road safety datasets, achieving mAP 0.92 for accurate helmet identification. • Designed an alert mechanism to flag violations, contributing to enhanced workplace and road safety monitoring.	

- Gained hands-on experience in computer vision, deep learning model training, and real-time video processing.

Tech Ventria, Corporate Website Development

10/2025 – 11/2025

- Translated business requirements into a modern, responsive, and user-centric web interface aligned with the company's brand identity.
- Implemented structured layouts, interactive UI components, and optimized navigation to enhance user engagement and accessibility.
- Ensured cross-browser compatibility, mobile responsiveness, and performance optimization for a seamless user experience.
- Collaborated with stakeholders to deliver a professional digital presence that effectively represents company services and vision.

Ai Voice Generator, Academic

09/2025 – 09/2025

- Developed a Flask-based AI voice generator using *pyttsx3* to convert text into natural-sounding speech with offline support.
- Implemented voice customization features, allowing users to control gender (male/female) and adjust speech rate.
- Enabled audio file generation in WAV and MP3 formats, with options to download and reuse the generated speech.

Expense Tracker System

09/2025 – 09/2025

- Built a Python-based Expense Tracker System to record, manage, and analyze daily expenses efficiently.
- Implemented CSV and Excel export functionality for easy data storage, reporting, and sharing.
- Designed a user-friendly frontend using HTML/CSS, enabling smooth input and visualization of expense data.

TO Do Digital Diary, Petcon Digital Diary

08/2025 – 08/2025

- Developed a Flask-based task manager to create, update, and delete tasks through a responsive CRUD interface.
- Integrated email alerts and notifications to remind users of upcoming or pending tasks.
- Implemented task scheduling and monitoring using APS scheduler, ensuring timely execution and better task management.

Education

Bs in Computer Science, University of Wah

09/2021 – 07/2025
Islamabad

Skills

Programming languages

- Python
- Nodejs

Other Technologies

- Cloud (Frappe)
- Docker

Frontend skills

- Html, CSS (with framework like Bootstrap, Tailwind CSS)
- Vue, Jinja2

Framework & Libraries

Flask, Fast API
